4   CALCULATION OF THE COMPOSITE ERROR / MPE

During the type approval test the intrinsic errors for temperature, voltage and frequency variation are determined per load point. The composite error is determined with the following formula:

$$\varepsilon_m = \sqrt{\varepsilon^2(I, cos\varphi) + \delta^2(T, I, cos\varphi) + +\delta^2(U, I, cos\varphi) + \delta^2(f, I, cos\varphi)}$$

Where

$\varepsilon^2(I, cos\varphi)$ = Intrinsic error of the meter at a certain load

$\delta^2(T, I, cos\varphi)$ = Additional error due to the variation of the temperature at the same load

$\delta^2(U, I, cos\varphi)$ = Additional error due to the variation of the voltage at the same load

$\delta^2(f, I, cos\varphi)$ = Additional error due to the variation of the frequency at the same load

Results are in the table below:
